## Hakkımızda

### OSMAK RULO MAKİNA SAN. VE TİC. LTD. ŞTİ.

2008 yılında kurulduğu günden itibaren Konveyör Bant Sistemleri ve ekipmanları, şase istasyon grupları, rulo ve tambur konusunda uzmanlaşmıştır. Firmamız yillardır AR&GE alanında yaptığı yatırımlar ile dünya standartlarına ulaşmış ve siz değerli firmalarımıza/ kuruluşlarımıza yüksek kalitede ki ürünlerini rekabetçi fiyatlarla sunmaktadır.

**Yillardır bantlı konveyörleri imal ettiğimiz alanlar:**

- Çimento fabrikaları
- Maden ocakları
- Cevher hazırlama tesisleri
- Dökümhanelerde kum hazırlama tesisleri
- Termik santraller
- Liman yükleme ve boşaltma tesisleri
- Demir çelik, cam sanayileri
- Büyük inşaat şantiyeleri
- Hafriyat ve beton hazırlama tesisleri
- Kimya kağıt ve şeker fabrikaları
- Tahıl siloları
- Kömür Ocakları
- CNC İmalat Makinaları ile Talaşlı İmalat

Konveyör sistemlerinin servis bakım sorun giderme ve diğer bütün yönleriyle ilgili hizmet sunan bir servis birimimiz vardır. Temel ilke olarak benimsediğimiz kalite ve güven çizgisinde sizlere hizmet vermekten gurur duyuyoruz.

### About Us

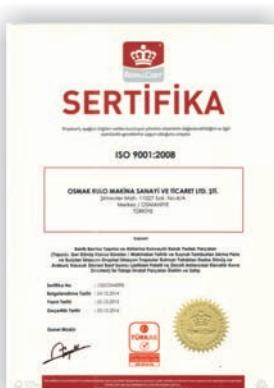

Osmak was established as a family owned company in Osmaniye, Turkey in 2008 however founder of company has 30 years of experience in the industry of conveyor belt systems. Osmak Rulo Makina Sanayi Ltd.Sti. is specialized in manufacturing high standard as well as competitive conveyor systems and its equipments.

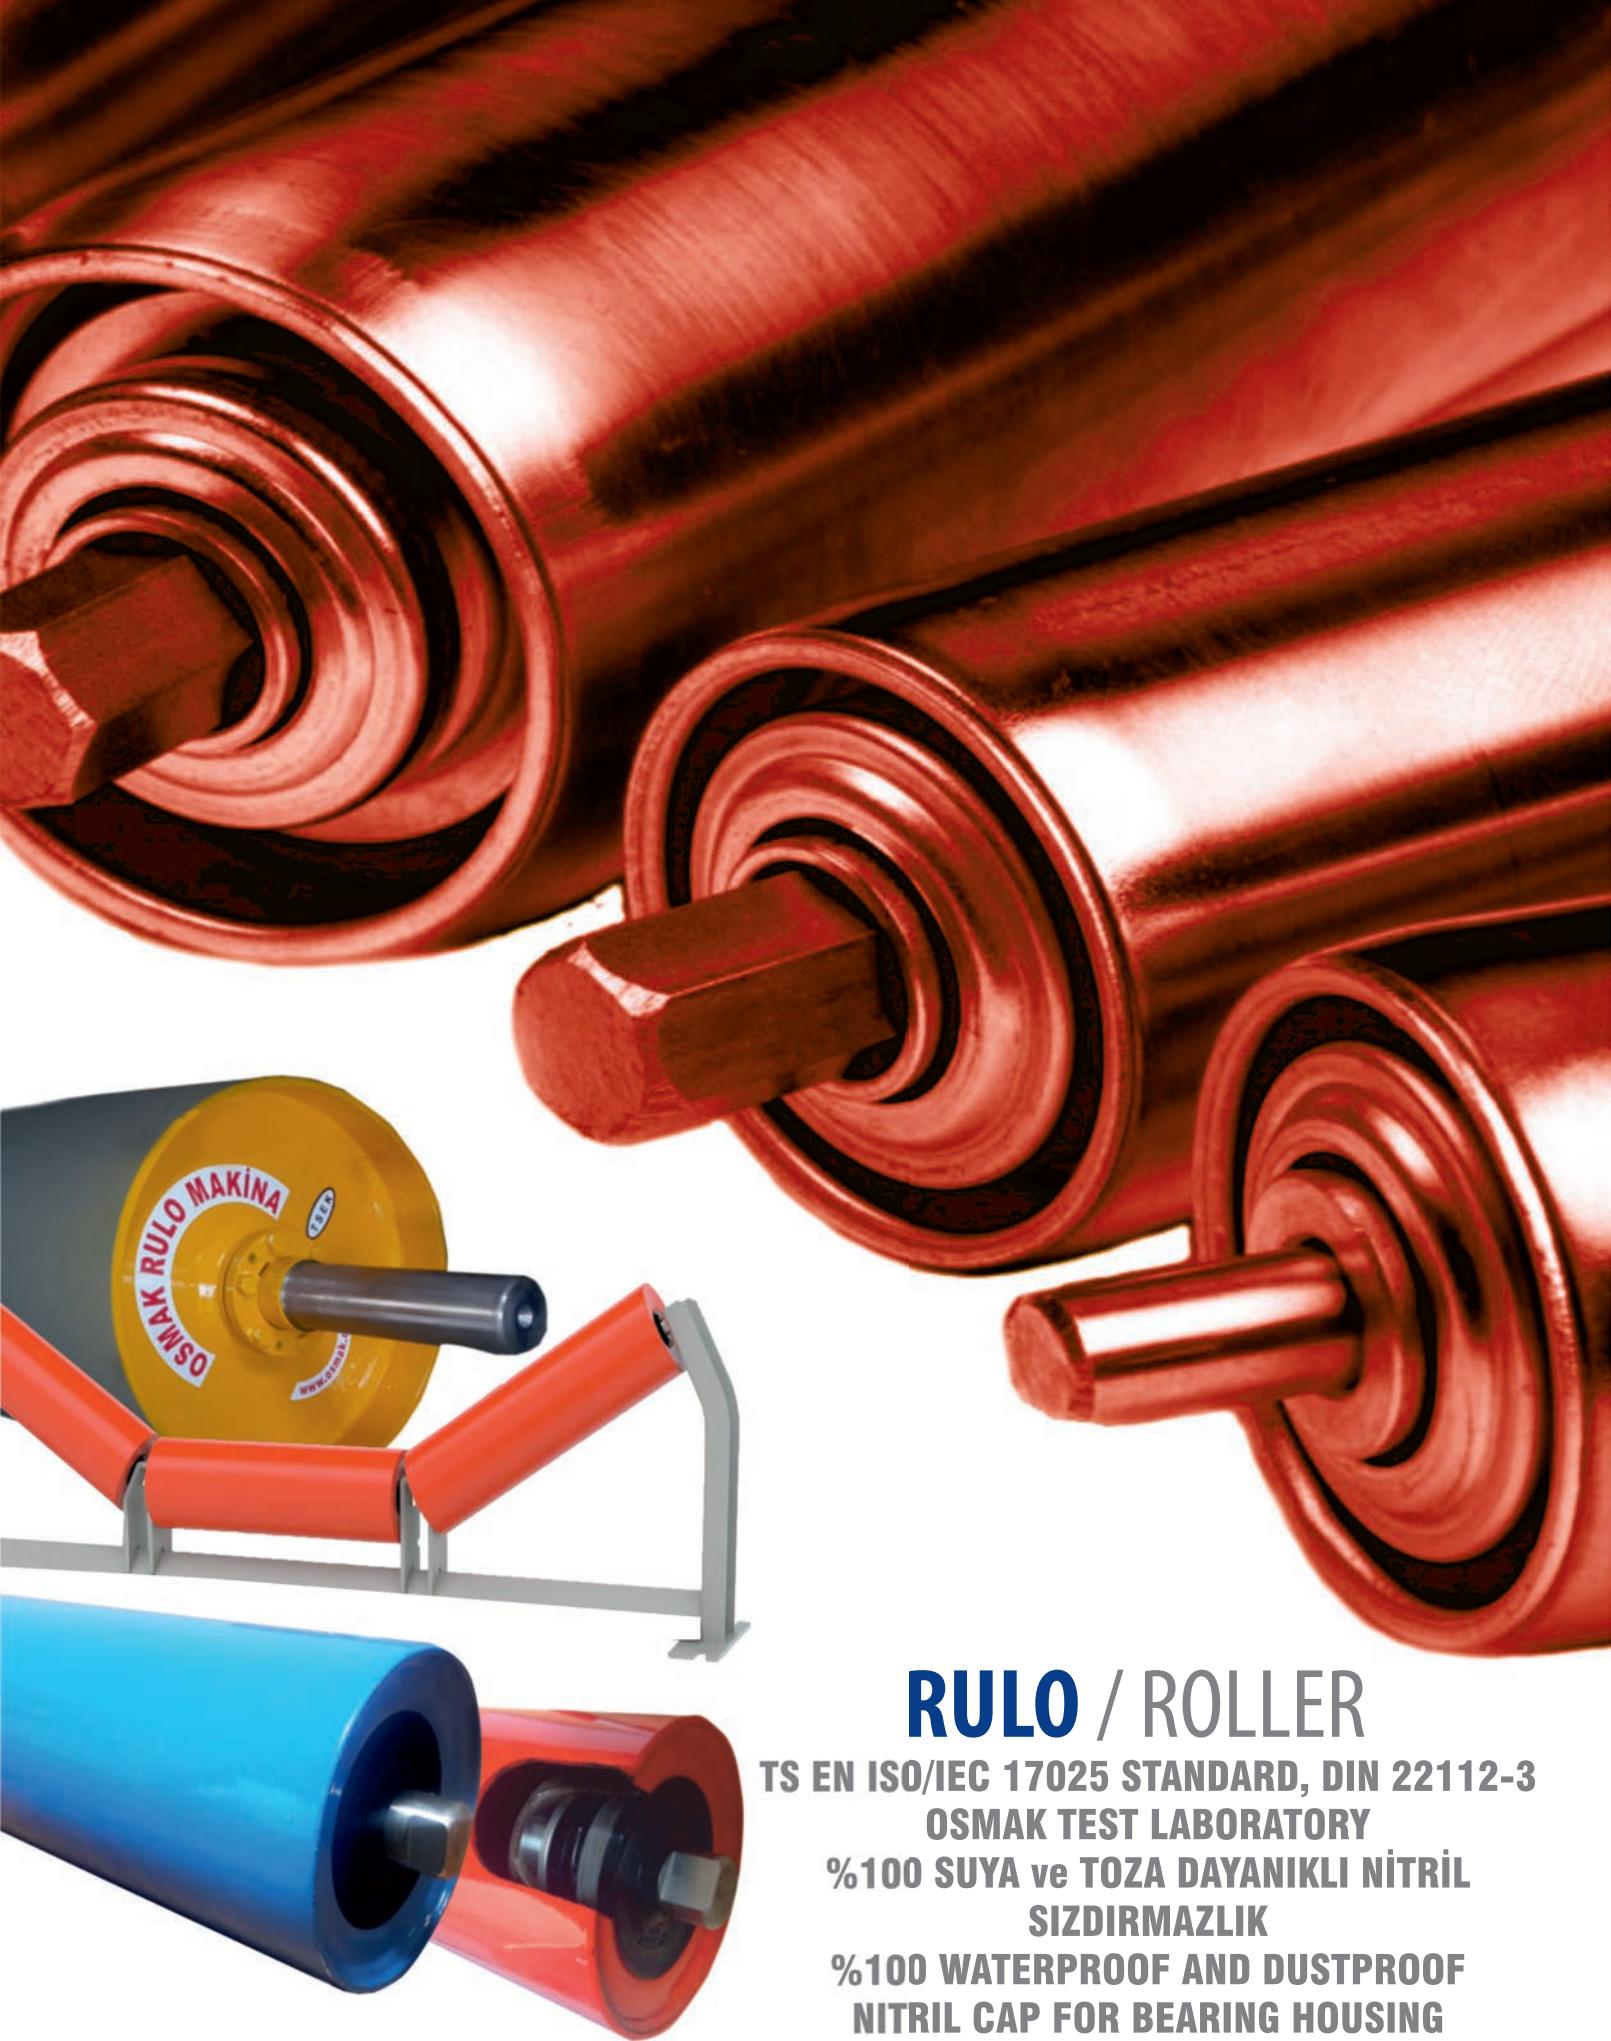

Highly experienced staffs have an extensive industry knowledge, and they work under strict quality control measures throughout the whole manufacturing process.

Osmak is capable to manufacture custom designed conveyor systems and its equipments specific to your each project requirements.

### INDUSTRIES WE SERVE:

1. Mining
2. Cement Plants
3. Mineral Processing
4. Iron-Steel Industry
5. Thermal Power Plant
6. Harbor Charging-Discharging
7. Massive Construction Site
8. Glass Industry
9. Excavation-Concrete Works
10. Chemical Plants
11. Sugar Plants
12. Paper Plants, Crop Silos, Packing and cargo

## RULO / ROLLER

TS EN ISO/IEC 17025 STANDARD, DIN 22112-3

OSMAK TEST LABORATORY

%100 SUYA ve TOZA DAYANIKLI NİTRİL

SİZDİRMALIĞI

%100 WATERPROOF AND DUSTPROOF

NİTRİL CAP FOR BEARING HOUSING

## Taşıyıcı Rulo

Taşıyıcı Rulolar genellikle 3 çeşitten oluşmaktadır.

**Düz Rulo:** Genellikle taşıt yüklemelerinde ve toplu yük boşaltma, aktarmalarda kullanılır.

**İkili Taşıyıcı Rulo:** Küçük taşınabilir konveyörlerde ve sıkılıkla bant genişliği 650 mm üstü bantlarda kullanılır.

**Üçlü grup Rulolar:** Bunlar üst taşıyıcı destek rulolarıdır. Genelde merkezden birbirine uzaklığı 750 ve 1250 mm ve yükleme noktasında 250 ve 350 mm olarak monte edilir.

### CONVEYOR ROLLERS

#### Carrying Rollers for material handling

The use of advanced techniques of design and production, the constant research of the most suited materials for different applications, the continuous investments in sophisticated production machines; all have allowed Osmak to keep the highest quality standards in conveyor roller manufacturing.

The use of strict control procedures in all production stages imposed by TS EN ISO 9001 : 2008 quality certification are a guarantee that the product is manufactured to work for its maximum life even in the most extreme conditions.

Our range of products allows customized solutions to solve any need of idle or driven roller conveyors.

Rollers series, Tapered rollers series

Pinion sprocket rollers series, Friction rollers series, Chain driven rollers for automated conveying

## Dönüş Rulo

Diskli dönüş ruloları bant yüzeyinde belirli durumlarda oluşan malzeme birikiminin engellenmesinde oldukça büyük rol oynar.

### RETURN ROLLERS WITH RINGS

These return rollers contribute to eliminating the build-up of material which particularly is present in the belt centre.

The straight tracking of the belt may be compromised by the type of conveyed material, specially when this material is sticky and thereby adheres easily to the belt surface.

In this case, material is also deposited on the return rollers that support the belt, adding an irregular addition of scale to the roller itself. As a consequence, not only wear and tear of the belt occurs, but forces are brought into play to move the belt away from its correct track. Return rollers with spaced rubber rings contribute largely to eliminating the build up of scale that forms in certain conditions on the belt surface. The rings are pointed, assembled at intervals, in the central part of the roller, where they have the scope to break up the scale which normally is present at the belt centre; meanwhile flat rings mounted in groups at the extremities of the belt, support and protect the belt edges, also in cases of limited belt wandering.

## Darbe Rulo

Üç taraflardan disklerin kaymasını engellemek için destek halkalarıyla sabitlenmiş çeşitli ölçülerdeki şok emici lastik kaplı darbe disklerinin bağlı olduğu ana gövdesi çelik olan bir bant rulosundan oluşur.

### IMPACT ROLLERS

Impact rollers consist of the basic steel PSV rollers design, on which are fitted rings, designed to resist and absorb the pressure given by the impact of materials onto the belt.

## Polyamid Rulo

Aşınma, sertlik, aside dayanıklılık korozya karşı koyma ve miknatışlanma istenmeyen özel projelerde veya buna benzer özelliklerdeki konveyörlerde kullanılır.

### Polyamide Roller

Used in special projects requiring resistance to abrasion, rigidity, acid and corrosion, as well as avoidance of magnetisation, and in conveyors with similar features.

## Telli / Temizleme Rulo

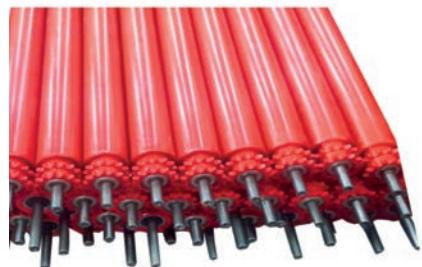

Telli temizleme ruloları bant yüzeyinde belirli durumlarda oluşan malzeme birikiminin engellenmesinde oldukça büyük rol oynar.

### NON-GRIP ROLLERS WITH STEEL SPIRALS

Type SA steel spiral rollers function the same way as molded disc rolls rollers. They also keep the belt clean and centered. Spiral rods are welded on the opposite right and left ends directly on the casing. Belt cleaning is by an Archimedian screw effect which rotates the roller and expels material from the sides.

The spiral also keeps the belt centered through its motion.

# RULO / ROLLER

## Zincir Dişli Rulo

Konveyör sisteminde bant makaralarının kenarına tek veya çift taraflı olarak takılan, dişileri zincirlerle birbirine bağlayan ve hareketlendiren makaraları siz müşterilerimizin projelerine uygun olarak imal etmekteyiz.

### Powered Roller Conveyors: Chain Drive

Chain-driven powered roller conveyors are the “four wheel drive” of the roller conveyor world! Whereas the lighter-weight lineshaft-drive conveyors can allow individual rollers to ‘slip’ if the load is high enough, the chain-driven roller is all about power and traction...

Typical Industries Warehouse & Logistic and palletising

## Bekçi Rulo

Kılavuz ruloları istikametleri belirleyen rulodur.

### CANTILEVER ROLLERS (BELT GUIDE ROLLER)

For various reasons, the conveyor belt may at times, tend to drift laterally.

In these cases it is possible to utilise vertical rollers with cantilevered spindles, these are generally known as belt guide rollers. It is necessary however to pay particular attention to the use to which these rollers are put, so that the forces on the guide roller by the belt do not damage the belt edge. In other words, guiding does not eliminate the true reason for the belt tracking off. Consequently, the belt may ride over the guide roller or become distorted against it. For these reasons it is advisable to always use guide rollers on the most suitable transom, the self-centralising, transom which rotates automatically whenever the belt tracks off conveyor centre and self-corrects.

## Helis Rulo

Rulonun ortasından kenarına doğru dönüş yaparak bandın yüzeyindeki yapışmış malzemeleri kauçuk diskle temizler.

### NON-GRIP ROLLERS WITH MOLDED RUBBER SPIRALS SG

Type SG Rollers with molded rubber spirals function the same way as molded disc rolls rollers. They also keep the belt clean and centered. Two non-abrasive molded rubber couplings are fitted on the roller with a left-right molded spiral and blocked at the ends with stop rings. Belt cleaning is by an Archimedean screw effect which rotates the roller and expels material from the sides. The molded spiral also keeps the belt centered through its motion.

## Kılavuz Rulo

Konveyör taşıyıcı rulo istasyonu ve Konveyör dönüş rulo istasyonu olarak iki şekilde kullanılmaktadır.

### Self-Aligning Idler

Used in two ways, as conveyor carrying roller station and conveyor return roller station.

## Yön Rulosu

Ruloların aralığından faydalananak kaldırma, döndürme, yön değiştirme için gerekli ekipmanlar rahatlıkla araya monte edilebilmektedir.

### Direction Roller

Utilizing from the space of rollers, it can be assembled into the gap of any kind of equipment required for elevation, turning, changing direction.

## Hassas / Tartım Rulo

Tartım bantlarında kullanılan hassas rulolardır.

### Sensitive / Weighing Roller

Sensitive rollers used in weighing belts.

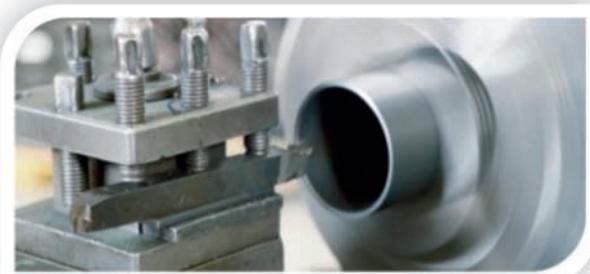

Osmak Makina olarak ürettiğimiz konveyör rulo ve tamburları her türlü çalışma ortamında fiziksel ve kimyasal korozyona karşı tam korumalı olup dünya standartlarına uygun imalat ve makina ekipmanlarıyla her zaman en iyi hedefler.

*The conveyor rollers and drums produced by Osmak Makine are fully protected against physical and chemical corrosion under any kind of operating conditions, and always aim at the best through world class manufacturing and machinery equipment.*

Rulo üretiminde kullandığımız sertifikalı miller hassas ölçülerle kesilmesiyle başlar.

*Certified shafts we use in roller production are primarily cut in sensitive dimensions.*

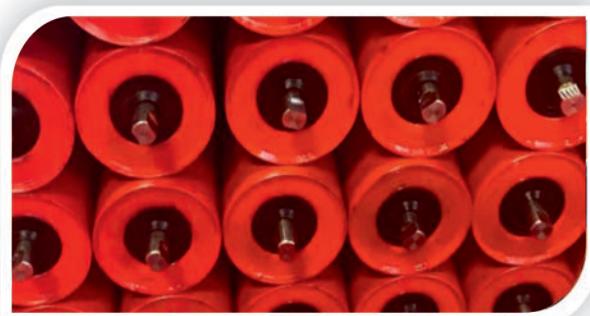

Kesimden çıkan ham ürünler çift eksenli boytamamlama tezgahlarına boy ve yataklanmalari yapılır.

*The cut raw materials are processed in double axis chamfering and length measuring machines.*

Montaj bölümüne gelen yarı mamüller sizdirmazlık ekipmanları ile beraber montajlanarak, statik boyalı bölümüğe aktarılır.

*Semi products which arrive to assembly division are assembled with the sealing equipment, and then transferred to the static paint division.*

Tüm işlemleri biten rulolar son kalite kontrolünden geçerek en uygun şekilde ambajlanır ve sevkıyat haline getirilir.

*Once all processes are complete, the rollers undergo final quality control, then are packaged and shipped.*

*Polyurethane Wheel and Rolling Pins Coating*

Forklift, istileme, depolama makinaları, taşıma arabaları, transpalet taşıyıcılar yüksek taşıma gücüne sahip her türlü koşulda çalışabilen dayanıklı yük tekerleri poliüretan kaplama.

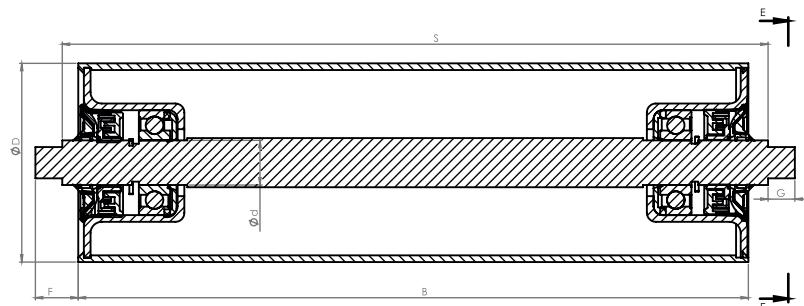

- Poliüretan tekerler kauçuğa oranla daha fazla taşıma kapasitesine sahip ve ekonomiktir.
- Titreşim sönmleme özelliği ile sessiz çalışır.
- -40°+80° çalışma sıcaklığı aralığı.
- Kimyasallara karşı dirençli oluusu.
- Sürünmeye, darbeye ve aşınmaya dayanıklılığı.
- 40 Shore ve 95 shore sertliği aralığında üretimi.
- İstenilen ölçülerde imalatı mümkündür.

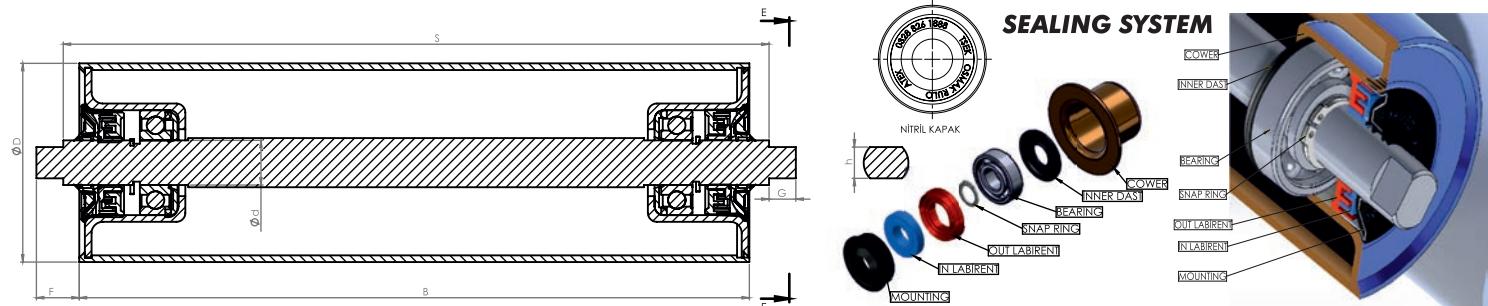

**Polyurethane coated load wheels can work better under all conditions having high load capacity in forklifts, stacking, stocking machines, transport vehicles, pallet truck vehicles.**

- Polyurethane wheels have more load capacity than rubber wheels and these are economical.
- It works silently by means of vibration isolator feature.
- Operating range: -40°C - +80°C
- Resistance to chemicals
- Resistance to friction, impacts and abrasion.
- Hardness: 40 Shore A - 95 Shore A
- Manufactured in desired sizes and colour.

**3'lü İstasyon Grubu / 3-Parted Station Group****Yüksek Kalite**

yüksek kaliteli  
konik rulmanlar,  
en ağır yük  
taşımalar için

*High Quality*

High quality cone  
roller-bearings for  
heavy loading  
duties

**Akıllı Kenar Boşluğu**

Sektörde en küçük rulo  
boşluğu ile maksimum  
kemer koruması

*Smart Edge Gap*

Maximum belt  
protection with the  
smallest roller gap  
in the sector

**Patentli Sızdırmazlık**

Sızdırmazlığa ve Toza Karşı  
%100 Mükemmel Koruma

*Patented Sealing*

Excellent protection  
against abrasion  
and dust

**Ayrılabilir Parça**

3 adımda rutin  
bakımlar için kolaylık

*Detachable Part*

Ease of routine  
maintenance in 3  
steps

**Tekli İstasyon Grubu**

Single Station Group

**2'li İstasyon Grubu**

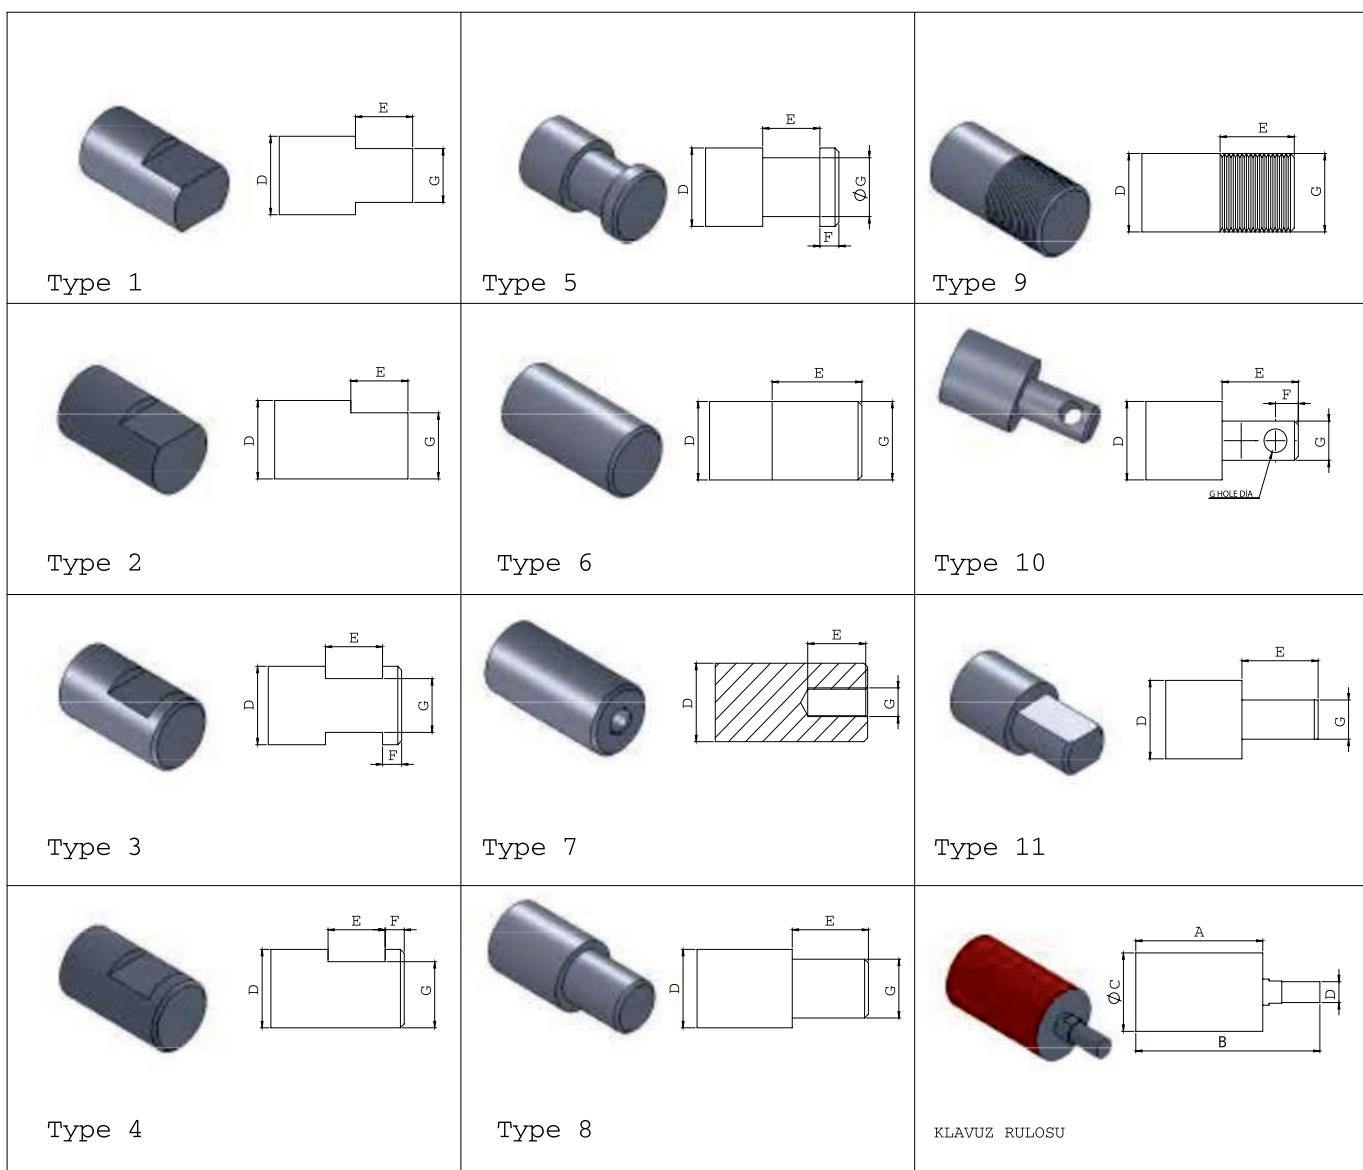

2-Parted. V-Type Station Group

### Gergi / Kuyruk Tamburu

Bant boyunun kısa olması durumunda kayışının sonuna kuyruk tamburu olarak takılır ve gerdirme sistemi tamburun miline bağlanır. Bant boyunun uzun olması durumunda ise kuyruk tamburu olarak sonra takıldığı gibi bant gergi sistemi içinde ağırlık mekanizmaları ile beraber kullanılır.

#### Tension / Tail Pulley

In case the belt length is short, it is installed as tail pulley to the end of the belt and connected to the shaft of the tension system pulley. In case the belt length is long, it is used as tail pulley at the end, and used with weight mechanisms within the band tension

### Tahrik Tamburu

Bant kayışına hareket veren tamburdur ve bandın başına takılır. Tamburun gövde borusunu iyi kavrayabilmesi için kauçuk kaplama yapılır. Sökülebilir milli olup pens sistemi ile tambur borusuna bağlanır.

#### Drive Pulley

The pulley that drives the belt, assembled to the head part of the belt. The drum is coated with rubber for allowing the pulley to grip the body pipe tightly. It has a detachable shaft connected to the pulley pipe through a clamp system.

### Saptırma Tamburu

Tahrik ve kuyruk tamburlarına göre daha küçük çaplı olurlar. Görevleri ise bandın gergi ve tahrik tamburlarına sarılmalarını, yönlendirilmelerini sağlamaktır.

#### Deflection Pulley

It has smaller diameter in compare to drive and tail pulleys. It serves for wrapping the belt around tension and drive pulleys, and directing them.

### Manyetik Taşıma Tamburu

Paketleme sistemlerinin ölçüm kantalarında kullanılan hassas ölçüm Tamburu

#### Magnetic Conveyor Pulley

Sensitive weighing pulleys which are used in weighbridges of packing systems.

### Çubuklu Siyrici Tambur

Çubuklu tamburlar sistemde genellikle kuyruk kısmına takıldıkları gibi tahrik tamburu olarak da kullanılabilirler. Yan flanşların üzerine yerleştirilmiş olan çubuklar sayesinde bandın yüzeyine yapışmış olan yabancı maddeleri temizlemede kullanılır.

#### Wing Pulley

Wing pulleys are usually attached to the tail parts of the system; besides, they could be used as drive pulley. They are used for cleaning foreign matters stuck on the belt surface, by means of the wings placed on the side flanges.

### Polyamid Kaplı Tambur

Aşınma, sertlik, aside dayanıklılık koroziyona karşı koyma ve mıknatıslanma istenmeyen özel projelerde kullanılır.

#### Polyamide Coated Pulley

Used in special projects requiring resistance to abrasion, rigidity, acid and corrosion, as well as avoidance of magnetisation.

“

Her çap ve boyda standartları sertifikalarla belirlenmiş hassas malzeme kullanarak ürettiğimiz konik pensli, kaynaklı, boyalı olarak tahrik ve gergi tamburları imalatı yapılır.

”

İstenildiği takdirde tahrik tamburlarında kauçuk kaplama yapılır. Kavramanın daha iyi olması için 10-25 mm kalınlıklarda,  $65 \pm 5$  Shore sertlikte kaplanıp taşlanır, baklava veya çavuş desen açılır. Projeye uygun çeşitli sertlik değerlerine göre sıcak vulkanize olarak imal edilir.

Drive and tension pulleys are manufactured in any diameter and length, with cone clamp, as welded and painted , using accurate material standards of which are determined with certificates.

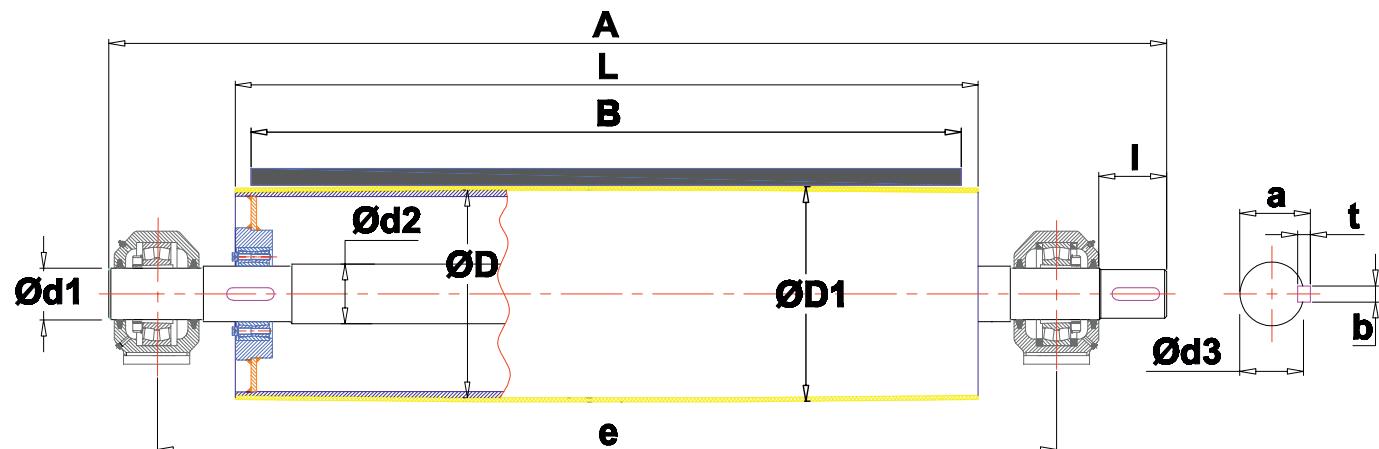

Drive pulleys could be coated with rubber upon request. For better grip, it is coated with 10-25 mm thickness,  $65 \pm 5$  Shore hardness, and stoned; thereafter, diamond or chevron pattern is opened. It is finally manufactured as hot vulcanized according to various hardness values based on the project.

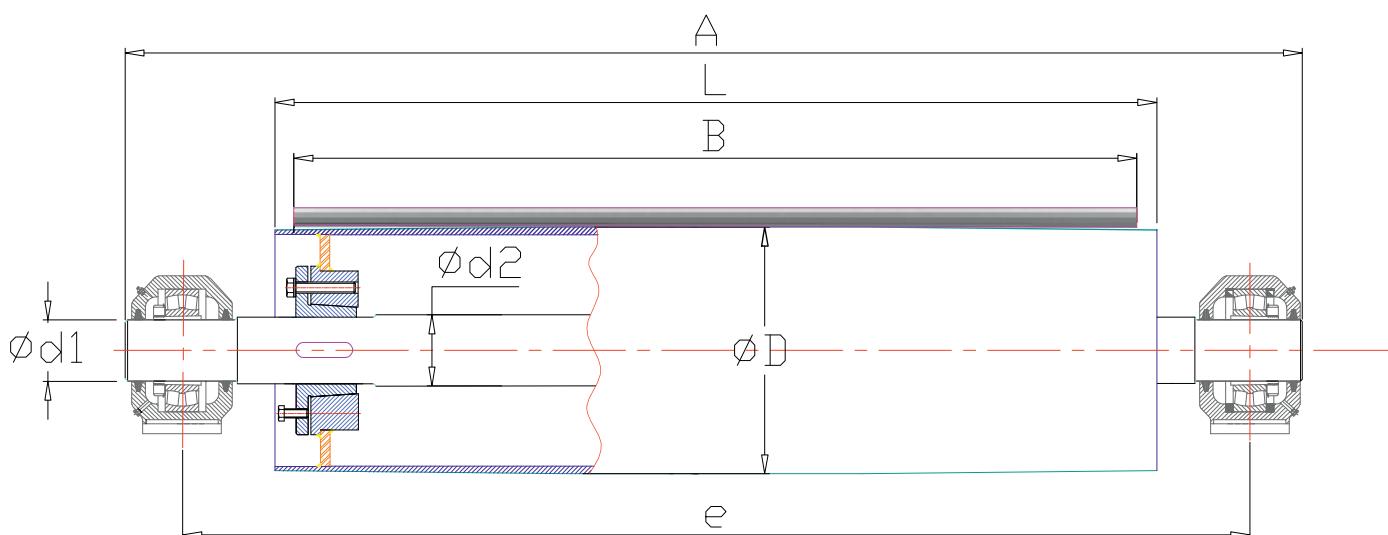

## TAHRİK TAMBUR ÖLÇÜLERİ / DRIVE PULLEY DIMENSIONS

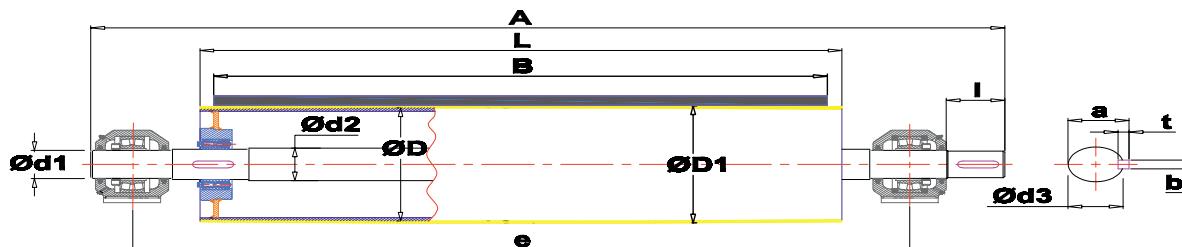

Bütün tamburların statik "Salınım" balansları firmamızca alınarak imal edilir.

*It is manufactured once the static "oscillation" balance of which is taken by our company.*

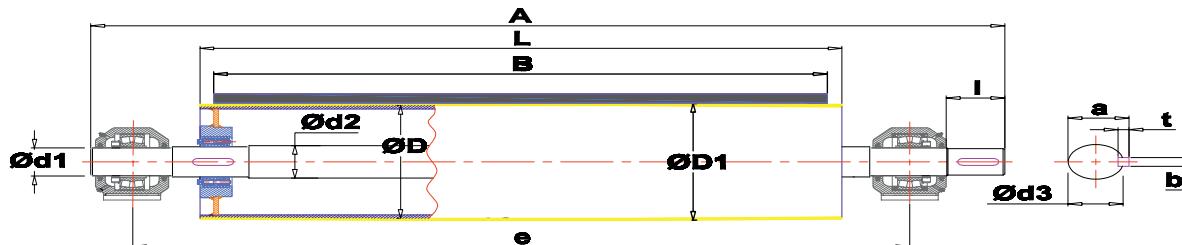

## GERGİ / KUYRUK/ SAPTIRMA TAMBUR ÖLÇÜLERİ / DIMENSIONS OF TENSION/TAIL/DEFLECTION PULLEYS

Tambur milini tambur borusuna bağlamakta kullanılan iki parçalı konik sistem sıkma pensleri Ç1050 kalite millerden firmamızda üretimi yapılmaktadır. ø40 mm çap kalınlığındaki millerden başlayıp ø230mm kalınlığa kadar çıkmaktadır. Şapkali ve düz tip olmak üzere iki tipi mevcuttur. Ağır şartlar ortamında çalışacak ve büyük çaplı tamburları için önerimiz şapkali tipin kullanılmasıdır.

Two-piece cone clamps used for connecting the pulley shaft to the pulley pipe are manufactured of C1050 quality shafts, by our company. Diameter of shafts range from ø40 to ø230 mm. Two types are available, as capped and flat. We recommend you to use capped type for heavy-duty large diameter pulleys.

### PVC Bant / PVC Belt

**En / Width:** 50-60-65-70-75-80-85-90-100-110-120-130-140-150 cm

**Boy :** İstenilen opsiyonel ölçü

*Length: Requested optional measure*

**Kalınlık:** İstenilen opsiyonel ölçü

*Thickness: Requested optional measure*

### Genel Özellikleri

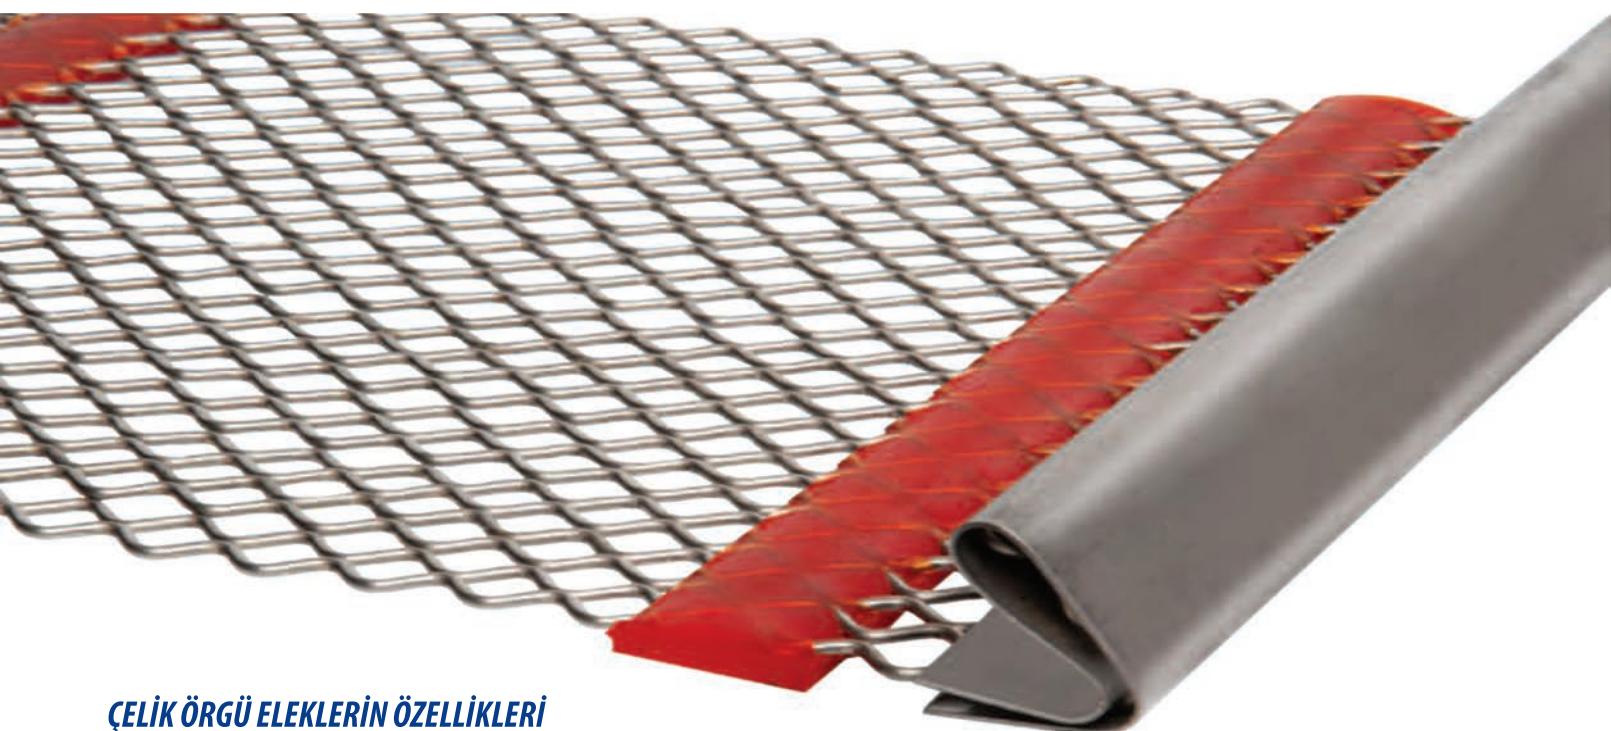

- 1- Genellikle Tabikauçuk esaslı malzeme,
- 2- İri taneli aşındırıcılı malzemenin zor, çalışma şartlarında taşınmasında kullanılır,
- 3- Uluslararası Normlara göre DIN 22102, TS 547, BS 490, UNI 3718'e uygun imaledilir,
- 4- Yüksek darbe enerjisine dayanıklıdır,
- 5- Max. 70°C çalışma sıcaklığına dayanıklı,
- 6- Elektrostatik geçirgenliği vardır,
- 7- Yağ, asit ve alkali ortamlarda kullanılmaz,

### General Features

1. Generally natural rubber based material
2. Used for transfer of coarse-grained abrasive material under heavy operating conditions
3. Manufactured in compliance with the following international norms  
DIN22102, TS547, BS490, UNI3718,
4. Resistant to high impact energy.
5. Resistant to max. 70°C operating temperature
6. Electrostatically permeable
7. Do not use in an environment affected with oil, acid and ammonia

### ÇELİK ÖRGÜ ELEKLERİN ÖZELLİKLERİ

## CNC TALAŞLI ÖZEL İMALAT

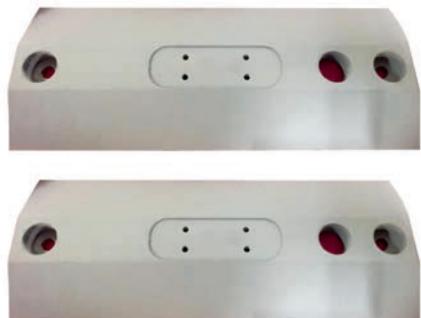

COSTUMIZED CNC MACHINING PRODUCTION

## KALİTE KONTROL PROSESİ

Müşteriden gelen talepler teknik birim tarafından incelenerek, projelendirmesi AutoCad'de yapılır ve müşteriden proje onayı alınır. Bu esnada ihtiyaç duyulan materyallerin tedarik edilmesine yönelik çalışmalar yürütülür. Proses aşamasında işleme başlamadan önce malzemelerin ilk ölçümleri yapılır. Daha sonra belli periyodlarda ürünler üretim aşamasındayken kalite kontrolleri ilgili departman tarafından ve süpervizörler vasıtası ile sağlanır. Üretimin başlangıcından sonuna kadar olan süreç süpervizörler tarafından denetlenir.

**Hammadde:** Tedarikçiden alınan hammaddeler fabrikamıza ulaştığında kalite kontrol departmanınca uygunluğu kontrolden geçirilir. Hammadde kalite belgesi üretici firmadan talep edilen ürünün niteliğine göre temin edilir. Kesimhane kısmına imalat emri verilir. Kesim esnasında malzemelerin kontrolü ölçüm cihazlarıyla kalite kontrol sorumlusu tarafından denetlenir. Uygun olmayan kesimler ret alır veya düzeltilemesi sağlanır.

**Kesimhane:** **Kesimden:** Kesimden sonra boru ve miller işleme merkezine gönderilir. İşleme merkezinde belli periyodlarda boru ve miller kumpas, mikrometre ve metre gibi ölçüm aletleri ile ölçülerek onaydan geçirilir. Ret olan ürünler ayrılarak tekrar istenen ölçüye göre işlenir.

**Kaynak İstasyonu: İşleme** merkezinden sonra ful otomasyon kaynak biriminde kapaklar rulolara kaynatılır. Kaynağı biten rulolar kalite kontrol birimince kaynak testine tabii tutulur. Kaynak kalınlığı verilen projeye uygun yapılır.

**Boya İstasyonu: Kaynaktan** sonra onay alan ürünler boyahaneye aktarılır. 200-250 C° ısıdaki elektrostatik fırın kazanında ürünler proje özelliklerinde boyanır. Boya kalınlığının mikron cinsinden ve kalitesinin projeye uygunluğu kontrol edilir.

**Toplama Merkezi: Boyadan** sonra ürünler toplama merkezine aktarılır. Toplama merkezinde özel presler ile işlem görür. İşlemi biten ürünler sevkıyat için hazırlanır.

**Test ve Kalibrasyon Merkezi: Sevkıyat** için hazır olan ürünler paketleme aşamasından önce bünyemizde bulunun test ve kalibrasyon laboratuvar merkezimizde DIN 22112-3 ve TS EN ISO/ IEC 17025 standart ve metotlarına göre test edilir

**Paketleme ve Sevkıyat Merkezi:** Sevkıyat için ahşap sandıklar veya metal kasalar kullanılır. Ürünlerin taşıma esnasında zarar

## QUALITY CONTROL PROCESS

Quality control (QC) is a procedure or set of procedures intended to ensure that a manufactured product or performed service adheres to a defined set of quality criteria or meets the requirements of the client or customer.

QC is similar to, but not identical with, quality assurance (QA). In order to implement an effective QC program, an enterprise must first decide which specific standards the product or service must meet. Then the extent of QC actions must be determined (for example, the percentage units to be tested from each lot). Next, real-world data must be collected (for example, the percentage of units that fail) and the results reported to management personnel. After this, corrective action must be decided upon and taken (for example, defective units must be repaired or rejected and poor service repeated at no charge until the customer is satisfied). If too many unit failures or instances of poor service occur, a plan must be devised to improve the production or service process and then that plan must be put into action. Finally, the QC process must be ongoing to ensure that remedial efforts, if required, have produced satisfactory results and to immediately detect recurrences or new instances of trouble.

**Raw material QC:** First step of Quality Control starts with acceptance of order. At Osmak's technical department, mechanical engineers review each order, and project planning begins with technical drawing of each order on Autocad (if not provided by customer). Technical drawing must be confirmed by client. Procurement department orders raw material and equipments specific to per customer requirements. Raw material manufacturer issues quality and grade certificate for each production. Osmak's quality control technicians preview raw material and check each lot with precision measurement equipments.

**Sawing Process QC:** At this station, tubes and shafts accurately cut by sawing machine. Quality control department and supervisors control the accuracy of each tubes and shafts with high precision measurement equipment. Failures of each sawing will be fixed, or discarded if the defect too much. All materials processed at length finishing station before welding.

**Welding Station QC:** After length finishing station, we transfer all materials to full automation welding station. Each bearing housing or tube cover will be welded circularly onto tubes with no raises. Quality control department tests welding accuracy at the laboratory and with welding control spray in regular base to make sure no raises and no failures.

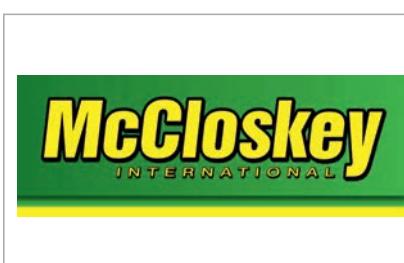

**PAINTING QC:** At the 200-250 C° stove paint station, painting each product with electrostatic 60-90 micron thick paint. Various colors available per customer demand. Quality control department checks quality of paint and micron with high precision measures to make sure we meet with projects requirements.

**ASSEMBLY QC:** All the parts of product will be assembled accurately and carefully with press machines and full automation assembling machines. Quality control department checks products during assembly period to make sure all well done.

**TEST AND CALIBRATION CENTER QC:** This is the last process before packing products for delivery. At most modern Osmak test laboratory, quality control staffs do tests and calibration for each lot in according to DIN 22112-3 and TS EN ISO/IEC 17025 standards and methods. List of test stations are as belows:

**PACKING AND DELIVERY QC:** The Products that pass the test transfer to packing and custom(if export) department. We use reinforced wooden cases or metal cases for local and export delivery. We make sure each packing well enough to carry the products to delivery point. All the export and local sales process gets done smoothly and on time with the support highly experienced professional export and accounting department.
